

Why Should We Recycle?

Ideally, we should aim to reduce and reuse before recycling waste. Everything we

it.

When we recycle, used materials are converted into new products, reducing the need to consume natural resources. If used materials are not recycled, new products are made by extracting fresh, raw material from the Earth, through mining and forestry. Recycling helps conserve important raw materials and protects natural habitats for the future.

Using recycled materials in the manufacturing process uses considerably less energy than that required for producing new products from raw materials ±even when comparing all associated costs including transport etc. Plus there are extra energy savings becau
